EXAMINER

VU, NGOC K

ART UNIT	PAPER NUMBER
----------	--------------

2611

DATE MAILED: 03/21/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 09/595,624	<b>Applicant(s)</b> OZ ET AL.	
	<b>Examiner</b> Ngoc K. Vu	<b>Art Unit</b> 2611	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 27 September 2004.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-19 and 27-33 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-19 and 27-33 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 8-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 is indefinite because there is no antecedent basis for the limitation "said **media** transport packets" in line 8. Since the term "data transport packets" is previously defined in line 6, the Examiner considers the term "said **media** transport packets" in line 8 as "said data transport packets" for examining purposes. Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Hraster et al. (U.S. 6,324,267 B1).

Regarding claim 1, Hraster discloses a method for transmitting data over a broadband networks having a plurality of downstream channels and an upstream channel, the method comprising the steps of:

receiving an upstream data packet from a broadband end-user unit (packet from host 108), via said upstream channel (via upstream telephone path); directing said upstream data packet to an addressable destination, designated in said upstream data packet (packet from host 108 which is intended for a destination in Internet 150 go to modem 106, which routes the packet via telephone line 131 and PSTN 109 to a telephone modem 110. The modem 110 routes the packet to router 101, which routes the packet to Internet 150 - see col. 4, lines 42-49);

receiving a downstream data packet from said addressable destination; converting said downstream data packet for conveying in a selected one of said downstream channels, thereby producing transport packets (packet from Internet 150 is received in CATV headend 122, is put in the proper form for transmitting over cable 132 to host 108 via modem 106 – see col. 4, lines 35-40);

directing said transport packets to said broadband end-user unit, via said selected downstream channel (the modem 106 reads the IP address of host 108 from the packet and routes the packet to host 108 – see col. 4, lines 40-42).

Regarding claim 2, Hraster discloses that the step of converting is performed according to a plurality of predetermined network resources (when the data packet from the Internet is to go the host 108, it is routed to manager 102, which puts the packet into the proper form for transport by the relevant link-level network – see col. 4, lines 35-40 and col. 5, lines 8-16).

Regarding claims 3-5, Hraster discloses allocating network resources according to resource allocation request so that the modem 106 can receive high data rate transmission over

cable plant. Control and management component 111 compares the serial number with a stored database of authorized serial numbers. Upon a match, the second tier of the authorization and authentication process is completed and appropriate system resources are allocated for modem 106 (see col. 3, lines 36-42; col. 10, lines 32-40).

Regarding claim 6, Hraster discloses the step of controlling the transmission rate of transport packets, via said selected downstream channel (receiving high data rate transmission over cable plant – see col. 10, lines 34-36).

Regarding claim 7, Hraster discloses that downstream channels are in-band channels (cable 132) and where said upstream channel is an out-of-band channel (telephone line 131) (see figure 1 and col. 4, lines 35-47).

5. Claims 8-11, 15-19, 32 and 33 are rejected under 35 U.S.C. 102(e) as being anticipated by Smyth et al. (US 20020007492 A1).

Regarding claim 8, Smyth discloses a method for transmitting data packets (data streams formatted into transport packets) over media transport channels, to a remote unit (STB), said remote unit being associated with a destination address embedded in said data packets (STB being associated with a destination address), the method comprising the steps of:

establishing a data session over a selected media transport channel (STBs 116 which are connected to a given CCM 118 must contend for the upstream channel that is available for propagating control signals from the STBs 116 to the CCM 118 and manager 200 – see page 4, 0035);

allocating logical media resources over said media transport channel for said data session (the system 100 is capable of dynamically allocating information channel resources to the subscribers via their respective STBs 116 – see page 6, 0052);

converting said data packets to data transport packets embedding said allocated logical media resources, according to a media transport specification (each of the data streams is modulated onto a carrier signal and the signal is upconverted to a transmission frequency that complies with CATV spectrum – see page 2, 0019. Transport processing module (TPM) 110 adds ID information to the video and audio content provided by the server 108 such as program specific information (PSI) and packet identification numbers (PIDs) - see page 4, 0041); and, transmitting said media transport packets via said selected at least one media transport channel (see page 2, 0019; page 3, 0026).

Regarding claims **9, 16 and 18**, Smyth discloses that a transport processing module (TPM) 110 adds ID information to the video and audio content provided by the server 108 such as program specific information (PSI) and packet identification numbers (PIDs) (see page 4, 0041).

Regarding claim **10**, Smyth discloses transmitting a media program to STB, as media transport packets according to said media transport specification, via said selected channel, said data transport packet and said media transport packets sharing a single transport program number (see page 6, 0052; page 4, 0041).

Regarding claim **11**, Smyth discloses producing and presenting the multimedia programming, video, and/or graphics (see page 2, 0015).

Regarding claims **15 and 17**, Smyth discloses that a subscriber requesting a program requiring a high information channel resource channel will be allocated an additional sub-rate channel or a super rate channel. A subscriber requesting a program requiring a low information channel resource channel will be allocated fewer (or only one) sub-rate channels (see page 6, 0052).

Regarding claim 19, Smyth discloses that the downstream channels are in-band channels (via path 134) and the upstream channel is an out-of-band channel (via path 136) (see figure 1 and page 2; 0019-0020).

Regarding claim 32, Smyth discloses session manager and IP software switch (session control manager 200 and network interface 150), connected to a broadband multimedia router (within 112), receiving downstream data session requests to a selected broadband network destination (receiving a request from STB to a broadband network destination), wherein said session manager and IP soft switch (session control manager 200 and network interface 150) allocates network resources for said data session for transmitting over said broadband network destination (see page 6, 0052; page 5, 0043; page 2; 0018, 0020 and figure 1).

Regarding claim 33, Smyth discloses that a subscriber requesting a program requiring a high information channel resource channel will be allocated an additional sub-rate channel or a super rate channel. A subscriber requesting a program requiring a low information channel resource channel will be allocated fewer (or only one) sub-rate channels (see page 6, 0052).

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 27 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by LaJoie et al. (U.S. 5,850,218 A).

Regarding claim 27, LaJoie discloses broadband multimedia system (1 – figure 1) comprising:

Art Unit: 2611

a communication bus (communication link within headend 2);

a broadband multimedia router (18), connected to said communication bus (communication link within headend 2), to a data router (11) and further between a plurality of media sources (16) and a plurality of network transmitter (3-5); and

a session manager (14), connected to communication bus (communication link within headend 2),

said session manager (14) providing routing instructions to said router (18), for directing media received from said media sources (16) to said network transmitters (3-5) for transmitting over a broadband network and for directing data (e.g., digital services) received from said router (11) to at least a selected one of the said network transmitters for transmitting over said broadband network to a specific destination (particular STB) (see figure 1; col. 9, lines 45-52; col. 11, lines 20-60).

Regarding claim 28, LaJoie discloses that session manager (14) receives data session request (request for program and/or service), authorizes said data sessions and allocates network resources for said data session (manager 14 instructs the servers when, how, and where to deliver a requested program and/or service – see col. 11, lines 53-60).

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smyth et al. (US 20020007492 A1) in view of Bauminger et al. (US 6681393 B1).

Regarding claims **12-14**, Smyth does not explicitly disclose at least partially overlaying at least one the data image over at least one media image. However, Bauminger discloses partially overlaying a picture on a display screen or partially overlaying a display message on the broadcast picture (see col. 4, lines 38-44). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system of Smyth by partially overlaying display message over broadcast picture as taught by Bauminger to present images concurrently for viewing on screen.

10. Claims 29-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over LaJoie et al. (U.S. 5,850,218 A) in view of Brodigan (US 6,530,086 B1).

Regarding claims **29-31**, LaJoie discloses data channel gateways 19 supports the communication between headend 2 and the set top terminal 6 via Internet Protocol datagrams (see col. 12, lines 60-66). LaJoie does not teach assigning IP address to set top terminal. However, Brodigan teaches sending an IP address of a programming host computer that is assigned to a specific program channel and time associated to a STB (see col. 5, lines 17-22; col. 6, lines 7-14). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system of LaJoie by sending an IP address of a programming host computer that is assigned to a specific program channel and time associated to a STB as taught by Brodigan in order to allow real time response from user to an external service provider via communication network.

### ***Conclusion***

11. The following are suggested formats for either a Certificate of Mailing or Certificate of Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence concerning this application or proceeding to establish a date of mailing or transmission under 37 CFR 1.8(a). Proper use of this procedure will result in such communication being considered as

Art Unit: 2611

timely if the established date is within the required period for reply. The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.

### **Certificate of Mailing**

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to:

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

on \_\_\_\_\_.  
(Date)

Typed or printed name of person signing this certificate:

\_\_\_\_\_

Signature: \_\_\_\_\_

### **Certificate of Transmission**

I hereby certify that this correspondence is being facsimile transmitted to the United States Patent and Trademark Office, Fax No. (703) \_\_\_\_\_ - \_\_\_\_\_ on \_\_\_\_\_.  
(Date)

Typed or printed name of person signing this certificate:

\_\_\_\_\_

Signature: \_\_\_\_\_

Please refer to 37 CFR 1.6(d) and 1.8(a)(2) for filing limitations concerning facsimile transmissions and mailing, respectively.

Art Unit: 2611

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ngoc K. Vu whose telephone number is 703-306-5976. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher Grant can be reached on 703-305-4755. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
